

Hands-On Astrophotography Workshop

Atsion Field, Wharton State Forest, NJ (the field is across from Atsion Lake on Rt. 206)

Wednesday, April 24, 2019 (Rain/Cloud date, Thursday April 25)

Starting Time: 7:30 pm promptly; imaging will begin around 8:30 pm.

In this workshop, we will set-up our scope and image a popular galaxy. This will include a hands-on demonstration of setting up the mount, including polar alignment, acquiring and plate solving our target, to actual image capture. Data will be collected and then emailed out to everyone so that they may process it. Image processing may be covered during the following May astrophotography meeting if there is enough interest.

This workshop is open to WAS members, non-members, and the general public alike.
